

# CAMSS

COMMON ASSESSMENT  
METHOD FOR STANDARDS  
AND SPECIFICATIONS

# Tallinn Declaration Overview

The Tallinn Declaration compels the Member States to take steps towards the interoperability by default

## Interoperability by default

“We confirm our commitment to the vision laid out in the **EU eGovernment Action Plan 2016-2020** and in the **European Interoperability Framework** [...] to strive to be open, efficient and inclusive, providing borderless, **interoperable**, personalised, user-friendly, end-to-end **digital public services** to all citizens and businesses – at all levels of public administration.”  
(p.3)

## In this regard, MS will:

“**Make use** of open source solutions and/or **open standards** when (re)building ICT systems and solutions (among else, to **avoid lock-ins**), including those developed and/or promoted by EU programmes for **interoperability and standardisation**, such as **ISA<sup>2</sup>**.” (p.6)

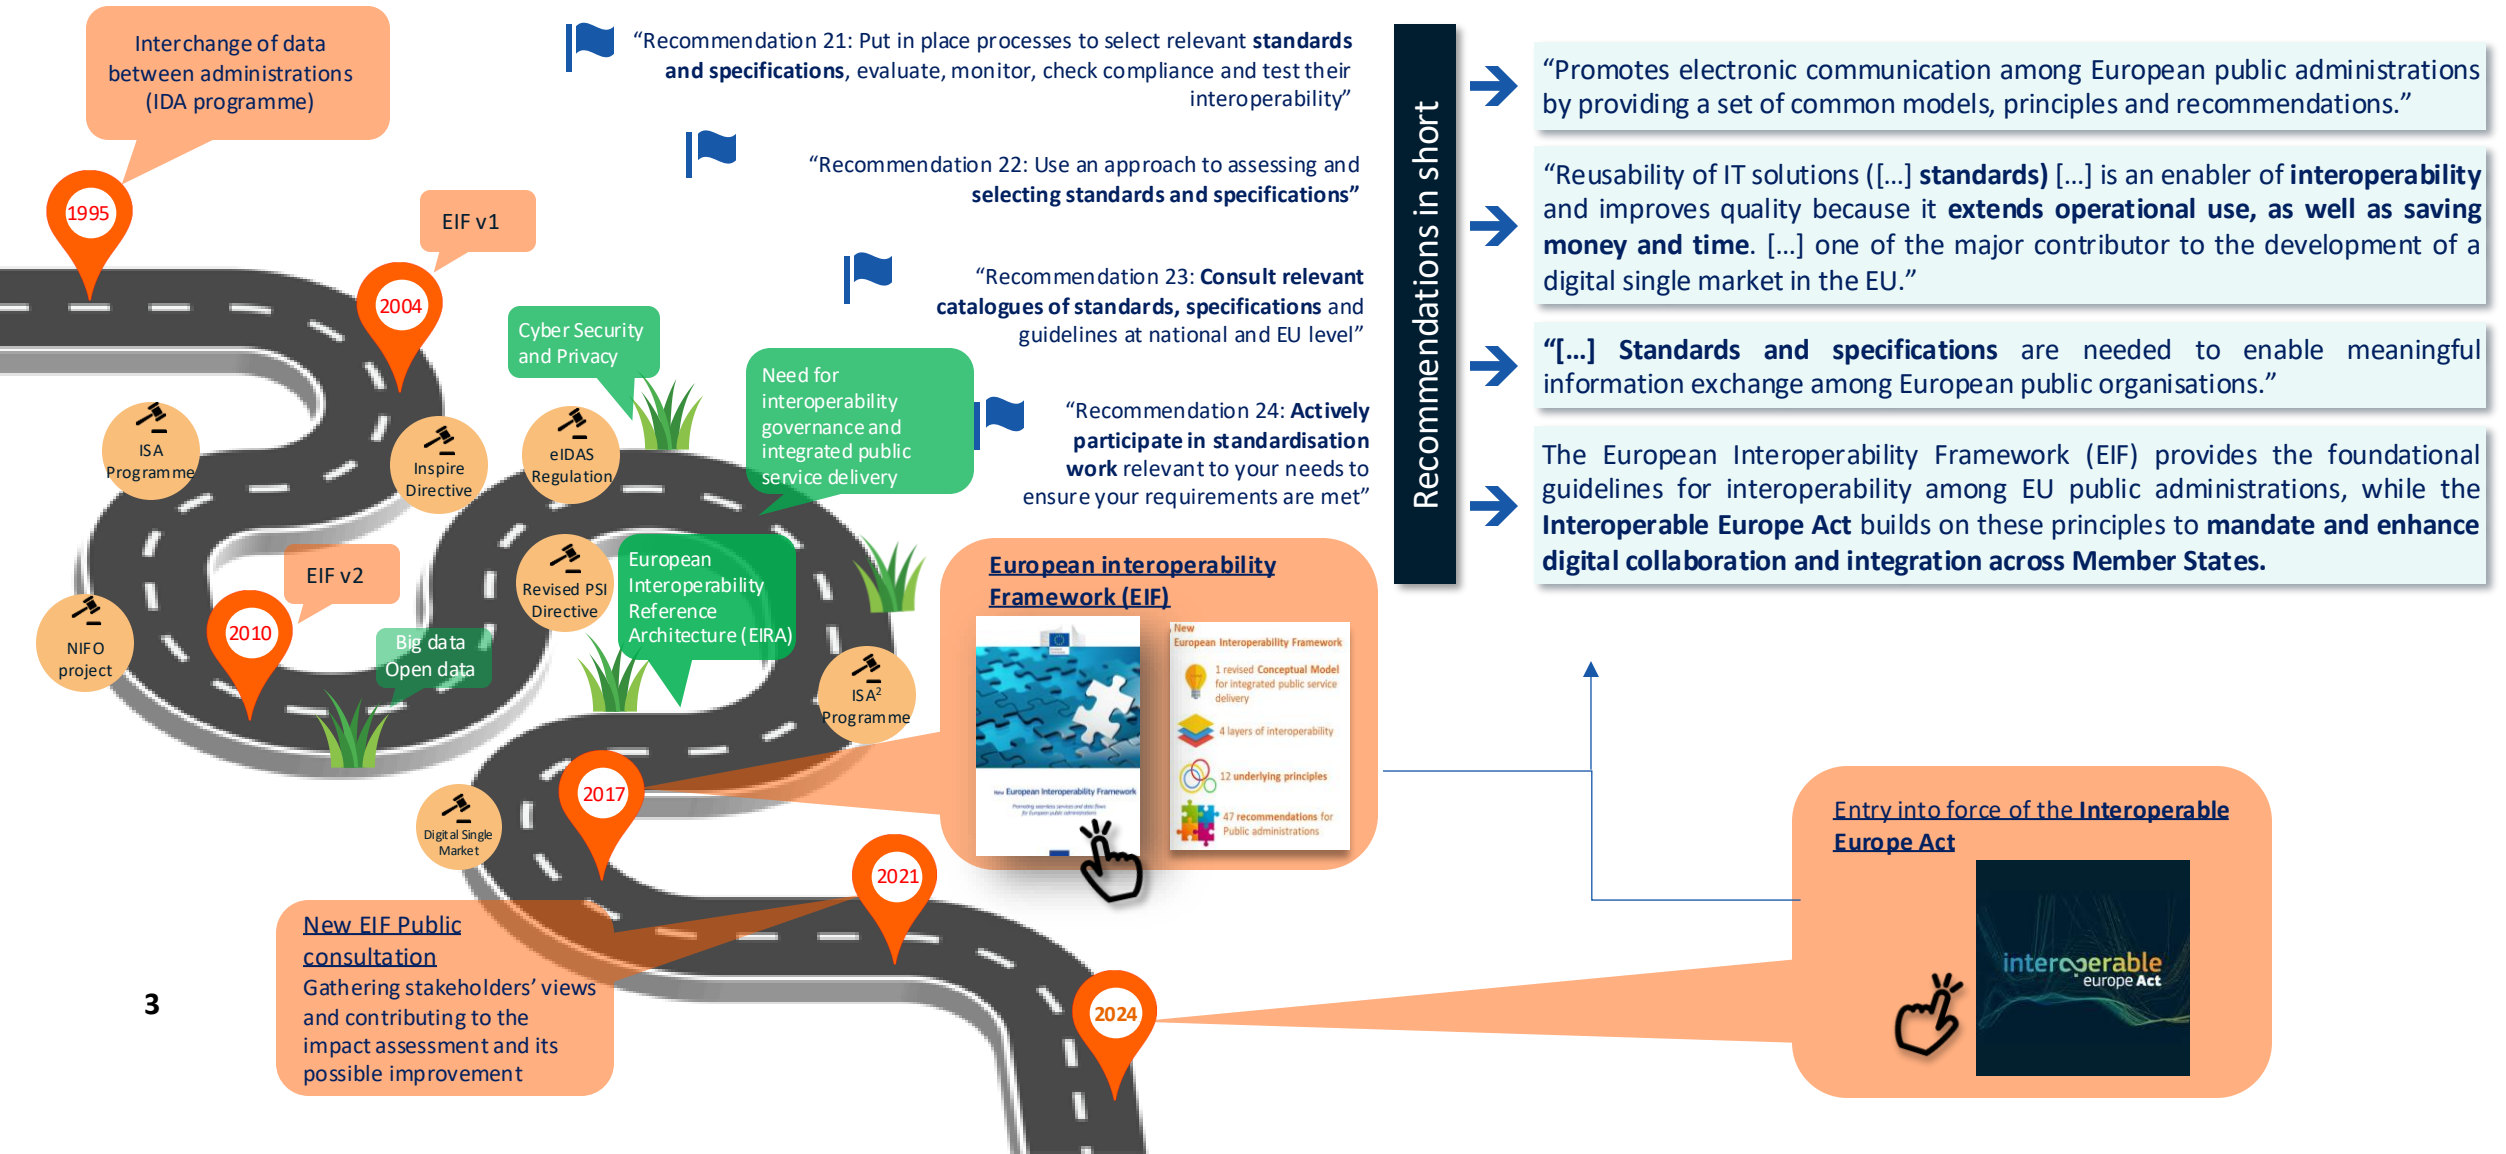

“**Modernise** the design of public services, **procurement** and contracting arrangement to make them compatible with modern and agile ways of developing and deploying digital technology.”  
(p.7)

“Increase the **digital leadership skills** among top civil and public servants and digital skills more widely within the public administration at all levels.” (p.7)

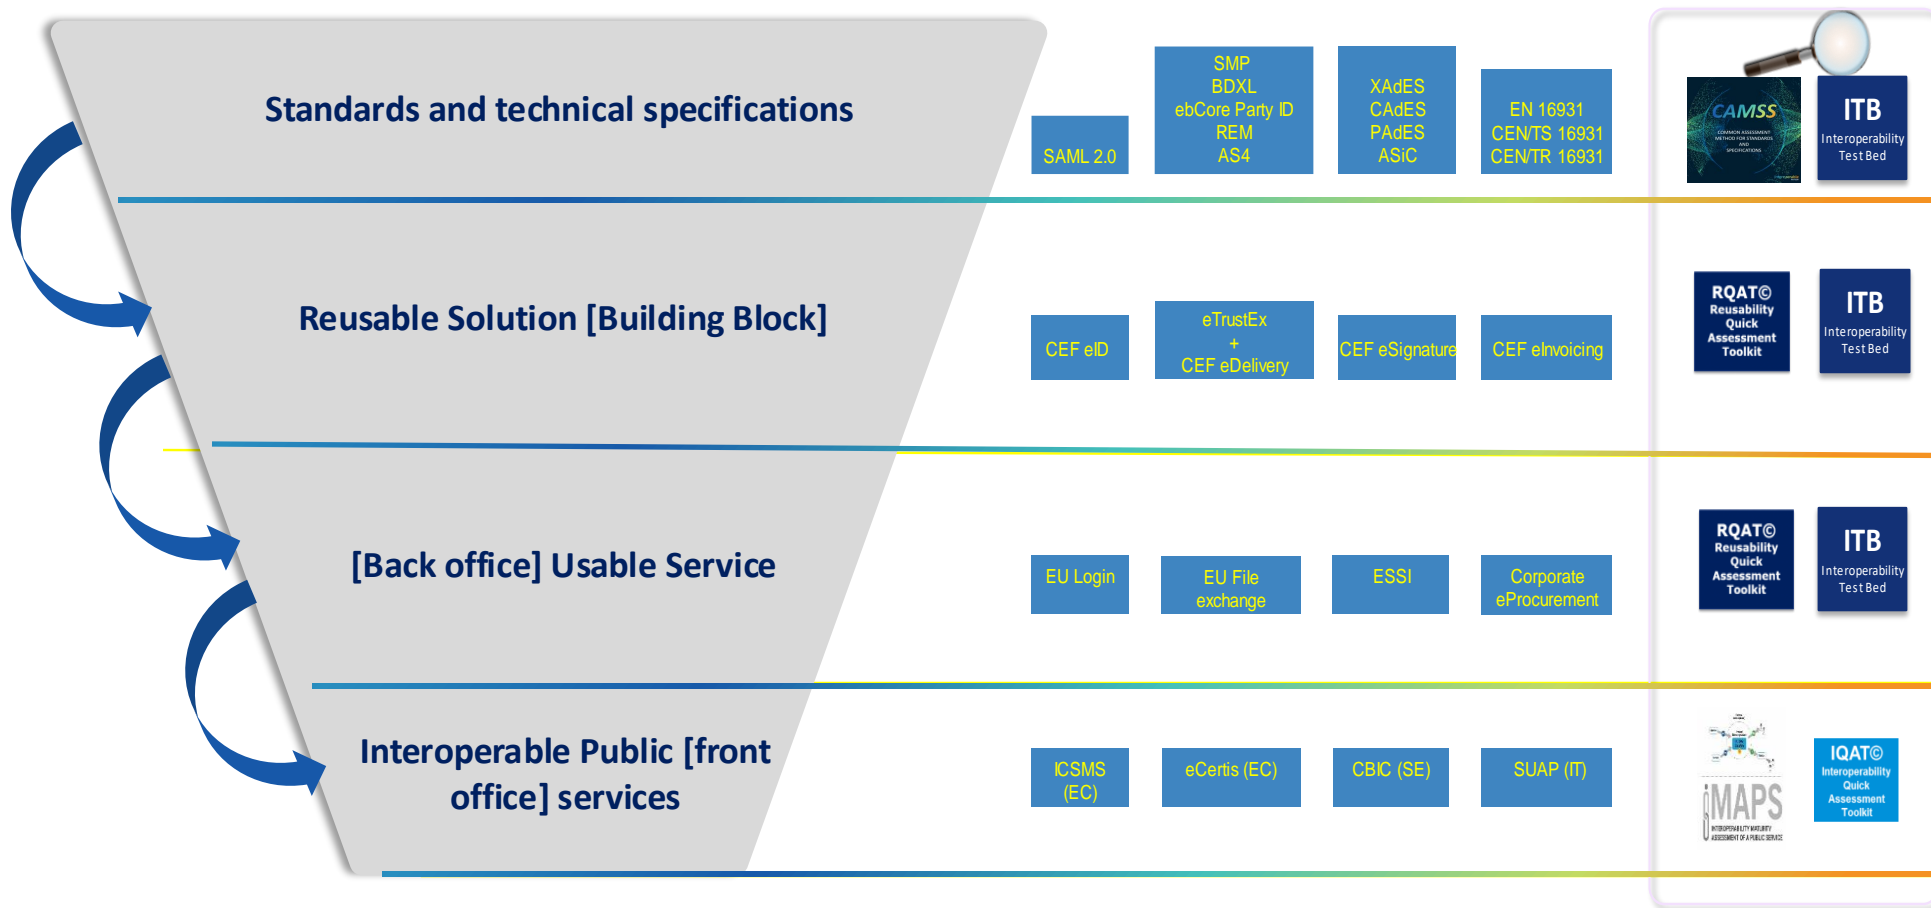

# EIF Storyline Overview

# EIRA supports EIF Implementation

# The Common Assessment Method for Standards and Specifications (CAMSS)

Do you struggle dealing with standards?

## The context

**ISA<sup>2</sup> Programme:** From January 2016 to December 2020, this programme has put in place, supported and operated public services and common frameworks for its main beneficiaries, namely public administrations at EU, national, regional and local level, as well as citizens and businesses interacting with those administrations.

**Digital Europe Programme:** From Jan 2021 to December 2027, that aims at accelerating the recovery and driving the digital transformation of Europe.

**EIF:** The Commission adopted the European Interoperability Framework (EIF) on the 16<sup>th</sup> of December 2010. According to the EIF, "decisions on what formalised specifications and technologies to use to ensure interoperability for European public services should be based on transparency, fairness and non-discrimination. One way to do this is to agree on a common assessment methodology and selection process".

**EIRA:** The European Interoperability Reference Architecture (EIRA) is an architecture content metamodel defining the most salient architectural building blocks (ABBs) needed to build interoperable eGovernment systems. It is an action created and maintained in the context of the ISA<sup>2</sup> Programme.

**Interoperable Europe Act:** The regulation aims to set up a new cooperation framework for EU public administrations to ensure the seamless delivery of public services across borders, and to provide for support measures promoting innovation and knowledge exchange. It establishes an interoperability governance structure with a view to creating an ecosystem of shared interoperability solutions for the EU's public sector.

## The need

- ① The business need of cross-Administration and cross-border services require that services can interact with each other with ease and hence avoid creating new electronic barriers between administrations.
- ② Need for public administrations to engage in public procurement of ICT solutions that require cross-administration or cross-border functionalities (plan interoperability architectures).
- ③ Need for formalised specifications in public procurement to avoid vendor lock-in situations.
- ④ Need for interoperability assessments and the share of interoperability solutions for the EU's public sector as laid out by the Interoperable Europe Act.

# What's CAMSS?

## CAMSS Overview

CAMSS is an established European guide for assessing and selecting standards and specifications for eGovernment projects. It can be used as a reference when building an ICT architecture and for justifying the selection of standards and specifications. For this purpose, CAMSS offers a set of solutions, assets and specifications.

### Benefits of CAMSS

#### Quality

*Increasing transparency, efficiency and accountability in public administrations*

#### Reusability

*Reuse existing assessments or specifications already recommended by the EU Member State*

#### Savings

*Reduce administrative burden, speed up assessment processes*

#### Compliance

*Assess the compliance of cutting-edge specifications with reference frameworks*

# What's CAMSS?

## Support for the Interoperable Europe Act

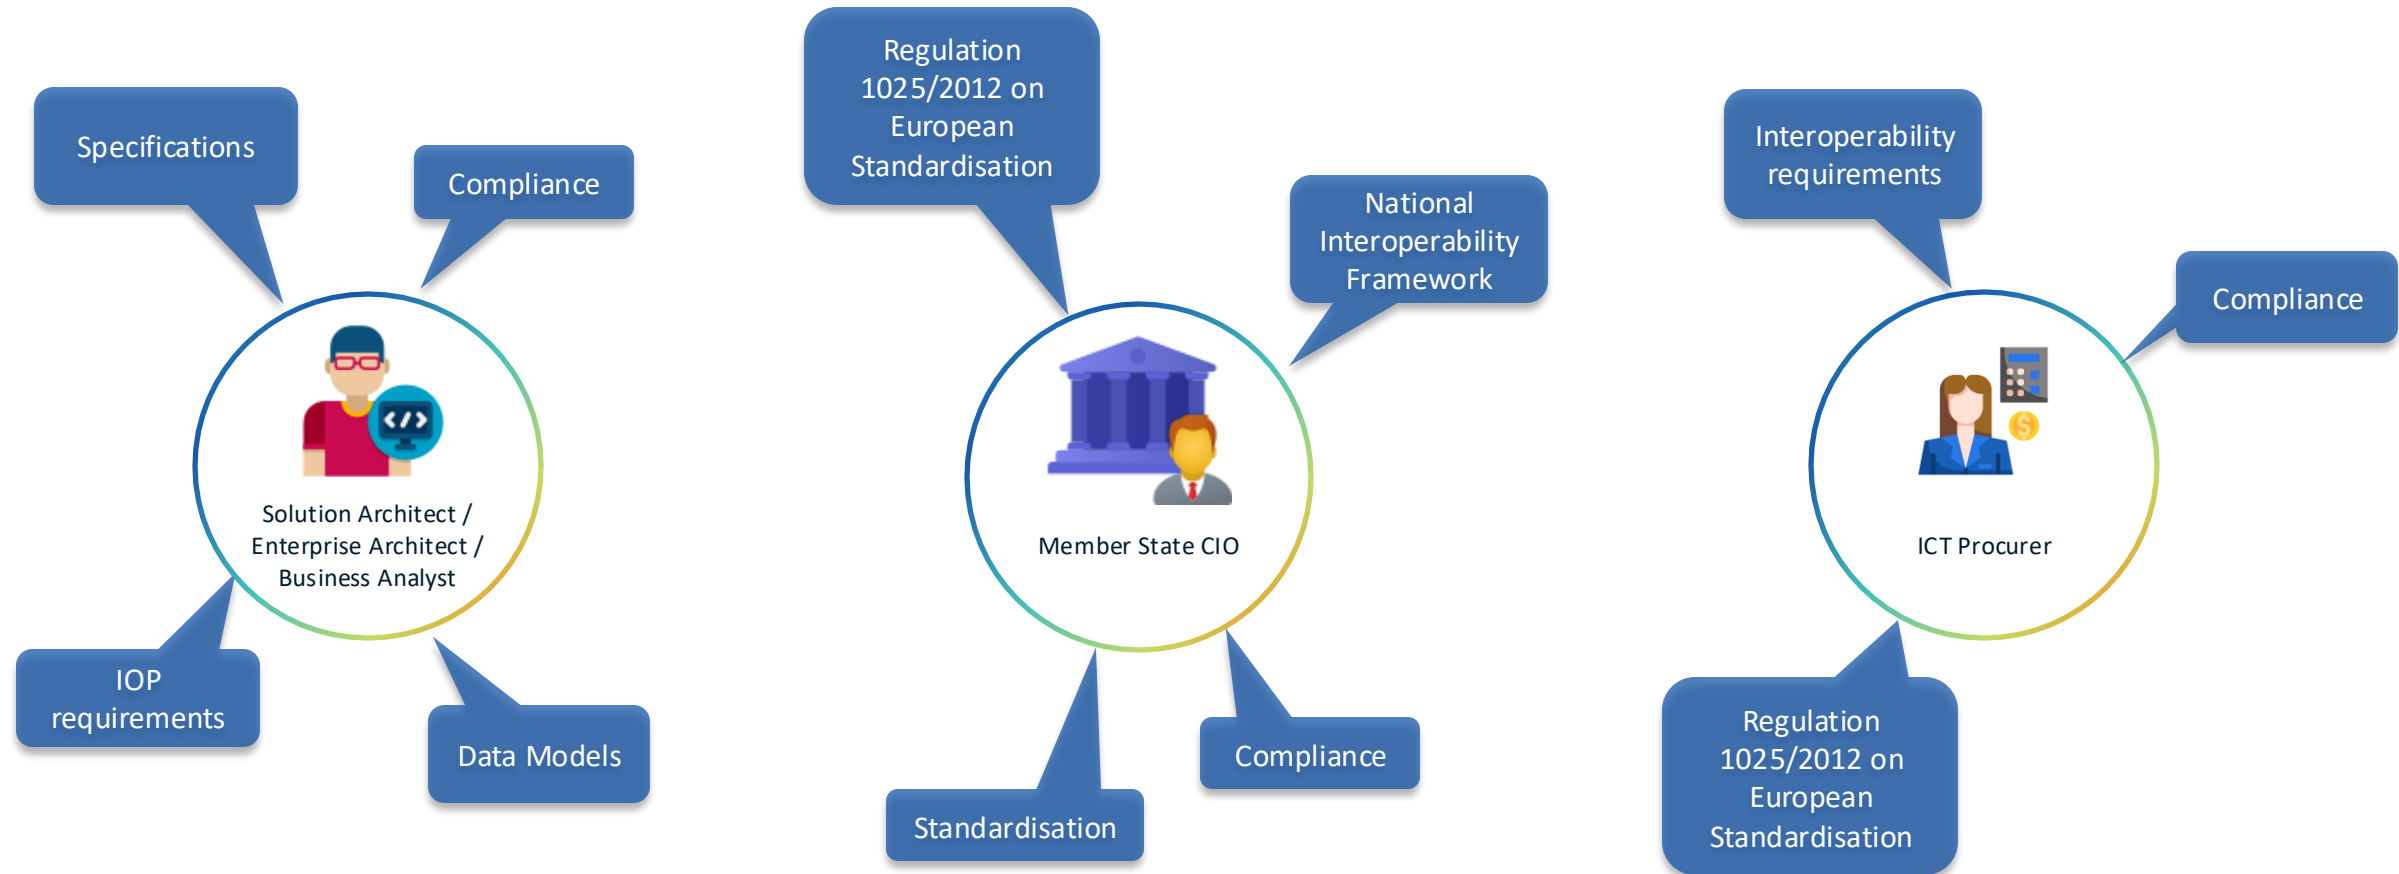

### CAMSS contribution to the effective implementation of the Interoperable Europe Act

Article 3: Interoperability assessment	Article 6: EIF and specialised Interoperability Framework	Article 8: Interoperable Europe Portal	Article 9: Policy implementation support projects	Article 15: Interoperable Europe Board	Article 16: Interoperable Europe Community	Article 19: Interoperable Europe Agenda
CAMSS Assessment EIF Scenario can contribute to assess interoperability specifications.	CAMSS serves as a methodology that underpins both the EIF and Specialized IF. Its adaptability and collaborative nature make it a valuable tool for ensuring interoperability across diverse sectors and domains.	CAMSS is a valuable resource for the Interoperable Europe Portal, offering guidance on selecting standards and specifications that contribute to interoperability solutions.	CAMSS is a project that supports the implementation of the EIF. CAMSS has always been conceived as an initiative whose main purpose is to guide the development of interoperable digital public sector services.	CAMSS is a useful reference tool to monitor and propose recommended interoperability solutions. Through the ELIS, standards and specifications can be accessed for its sharing and reuse.	CAMSS aligns with Article 16 by providing a structured approach to standards assessment and selection, making its users valuable contributors to the Interoperable Europe Community.	CAMSS can contribute to the strategic agenda (Interoperable Europe Agenda) by providing insights into the assessment and selection of standards and specifications necessary for cross-border interoperability.

# What's CAMSS?

## CAMSS Users

# What's CAMSS?

## CAMSS Solutions

<b>CAMSS Assessment</b>	The <b>evidence supporting the compliance</b> of a technical specification with a reference framework.
<b>CAMSS Assessment EIF Scenario</b>	This CAMSS Scenario allows to assess the compliance of interoperability specifications with the <b>EIF</b> .
<b>CAMSS Assessment MSP Scenario</b>	This CAMSS scenario is dedicated to the assessment of formal specifications in the context of <b>public procurement</b> .
<b>CAMSSaaS</b> (CAMSS as a Service)	A service through which users can request <b>assessments free of charge</b> .
<b>ELIS</b> (EIRA© Library of Interoperability Specifications)	A collection of specifications to define the interoperability requirements of a Solution categorised using the EIRA's Architecture Building Blocks.
<b>CSSV</b> (Core Standards and Specifications Vocabulary)	The core vocabulary used to <b>describe specifications and standards</b> .
<b>CAV</b> (Core Assessment Vocabulary)	The core vocabulary used to <b>describe assessments</b> .
<b>ELAP</b> (EIRA Library of architecture principles)	The EIRA library of architecture principles (ELAP) is intended to direct government organizations in initiating changes and <b>implementing IT projects</b> .
<b>ELAP Validator</b>	The ELAP Validator allows for the <b>conformance testing</b> of a designed solution <b>against the principles and guidelines of ELAP</b> .
<b>CAMSS Incompatibility Scenario</b>	The CAMSS Incompatibility Scenario aims to evaluate whether integrating a new specification or standard into an existing environment could potentially hinder its interoperability.

# What's CAMSS?

## CAMSS Assets

### CAMSS Assessment Library

Catalogue of the assessments produced using CAMSS Tools. Each assessment constitutes a CAMSS Solution and is fully reusable.

### CAMSS List of Standards

List with all the standards and technical specifications recommended by the Member States of the EU.

### CAMSS Change Management Process

Process to formalise how requests for changes and the development of new releases of CAMSS are managed.

### CAMSS RDF Conversor

Transformation tool developed in Python for the transformation of the CAMSS Assessments (EIF, MSP) in Excel format to RDF formats.

### CAMSS Specifications Graph

Data set of assertions on individuals belonging to the Core Standards and Specifications Vocabulary (CSSV). Simplifying, the description of standards and specifications using the CSSV.

### CAMSS Assessment Graph

Data set containing the assertions of all assessments produced with the CAMSS method.

# What's CAMSS?

## CAMSS Assessments

1

### USING IT

#### *Do it yourself:*

- You have access to **Assessment Resources**: *support to users, improved tools and training resources*

2

### RE-USING IT

#### *Reuse Assessments:*

- A growing **Collection of Assessments** *ready for reuse by the Standardisation Community*
- *List to Member States Catalogues of standards*

3

### CONSUMING IT

#### *Request the Service:*

- **CAMSS as a Service**: *provision of assessments on demand*

# CAMSS Assessments EIF Scenario

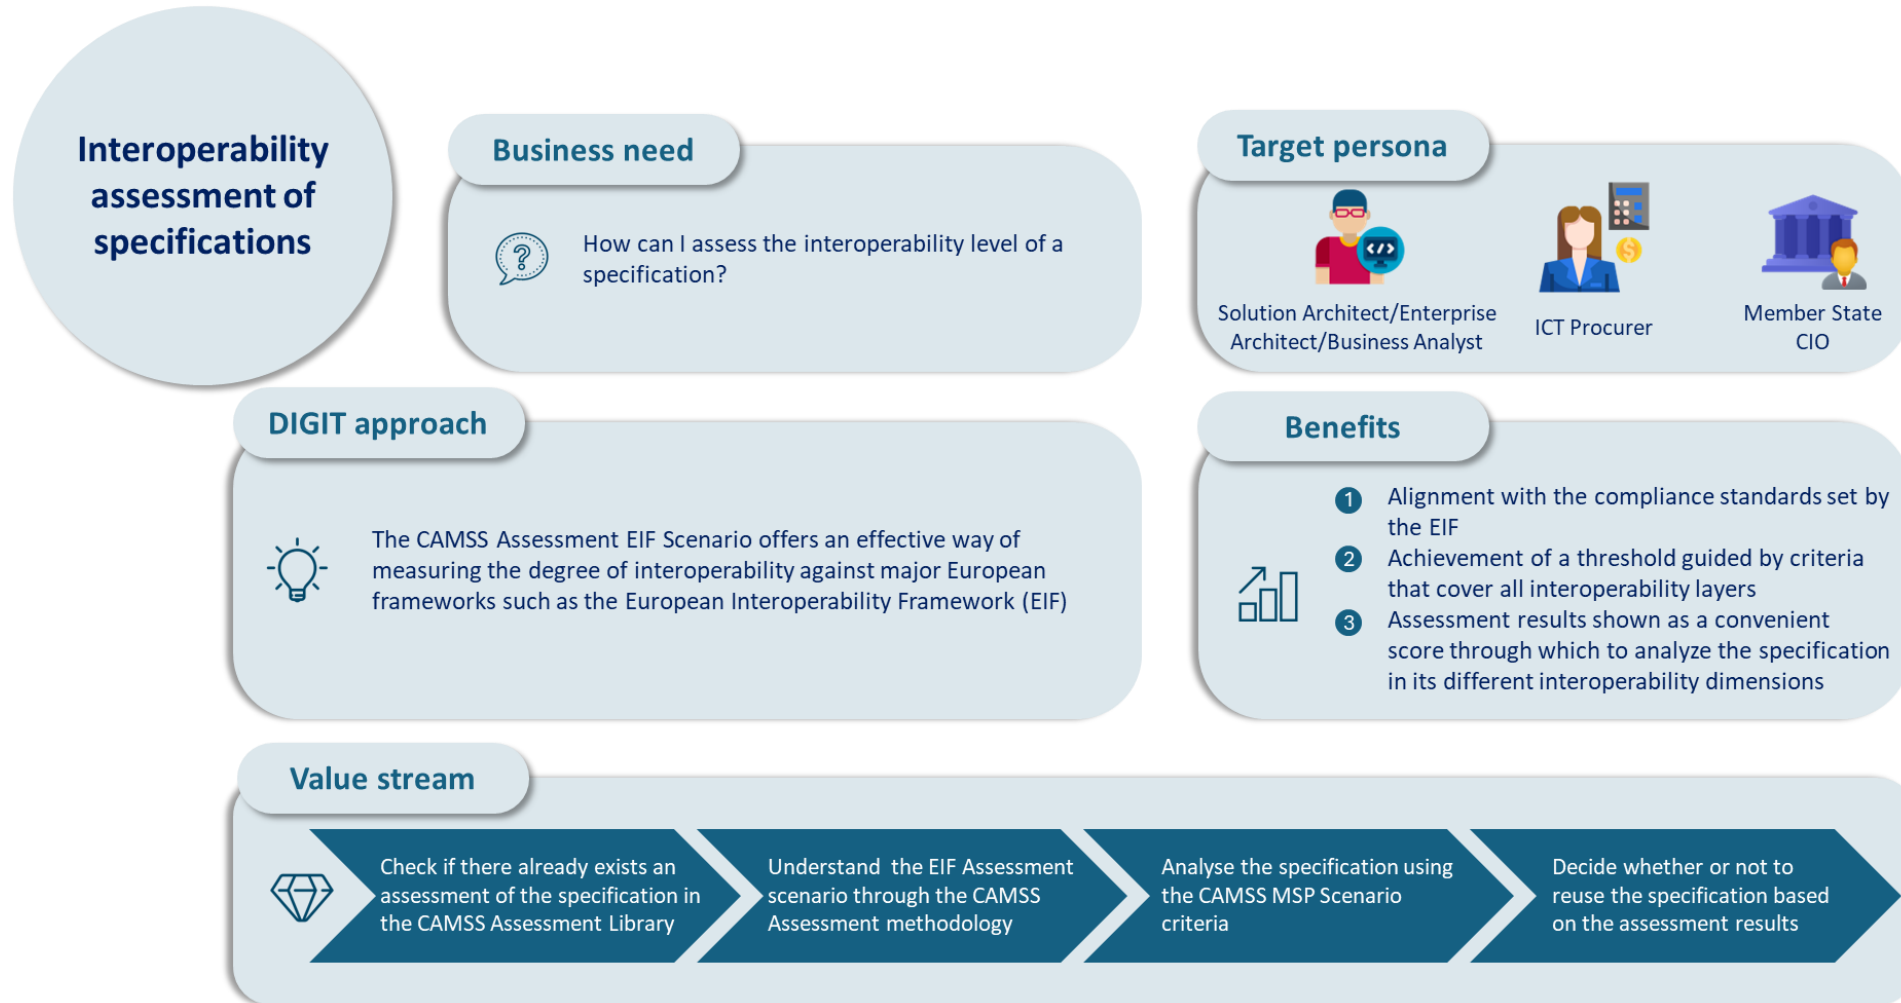

The CAMSS Assessment EIF Scenario contains different sections according to the insights and recommendations of the European Interoperability Framework (EIF). This CAMSS Scenario allows for the assessment of the compliance of interoperability specifications with the EIF. The objective of the obtained assessment is to determine the suitability of the assessed interoperability specification for the delivery of interoperable European public services.

# CAMSS Assessments EIF Scenario

## Value Proposition

# CAMSS Assessments MSP Scenario

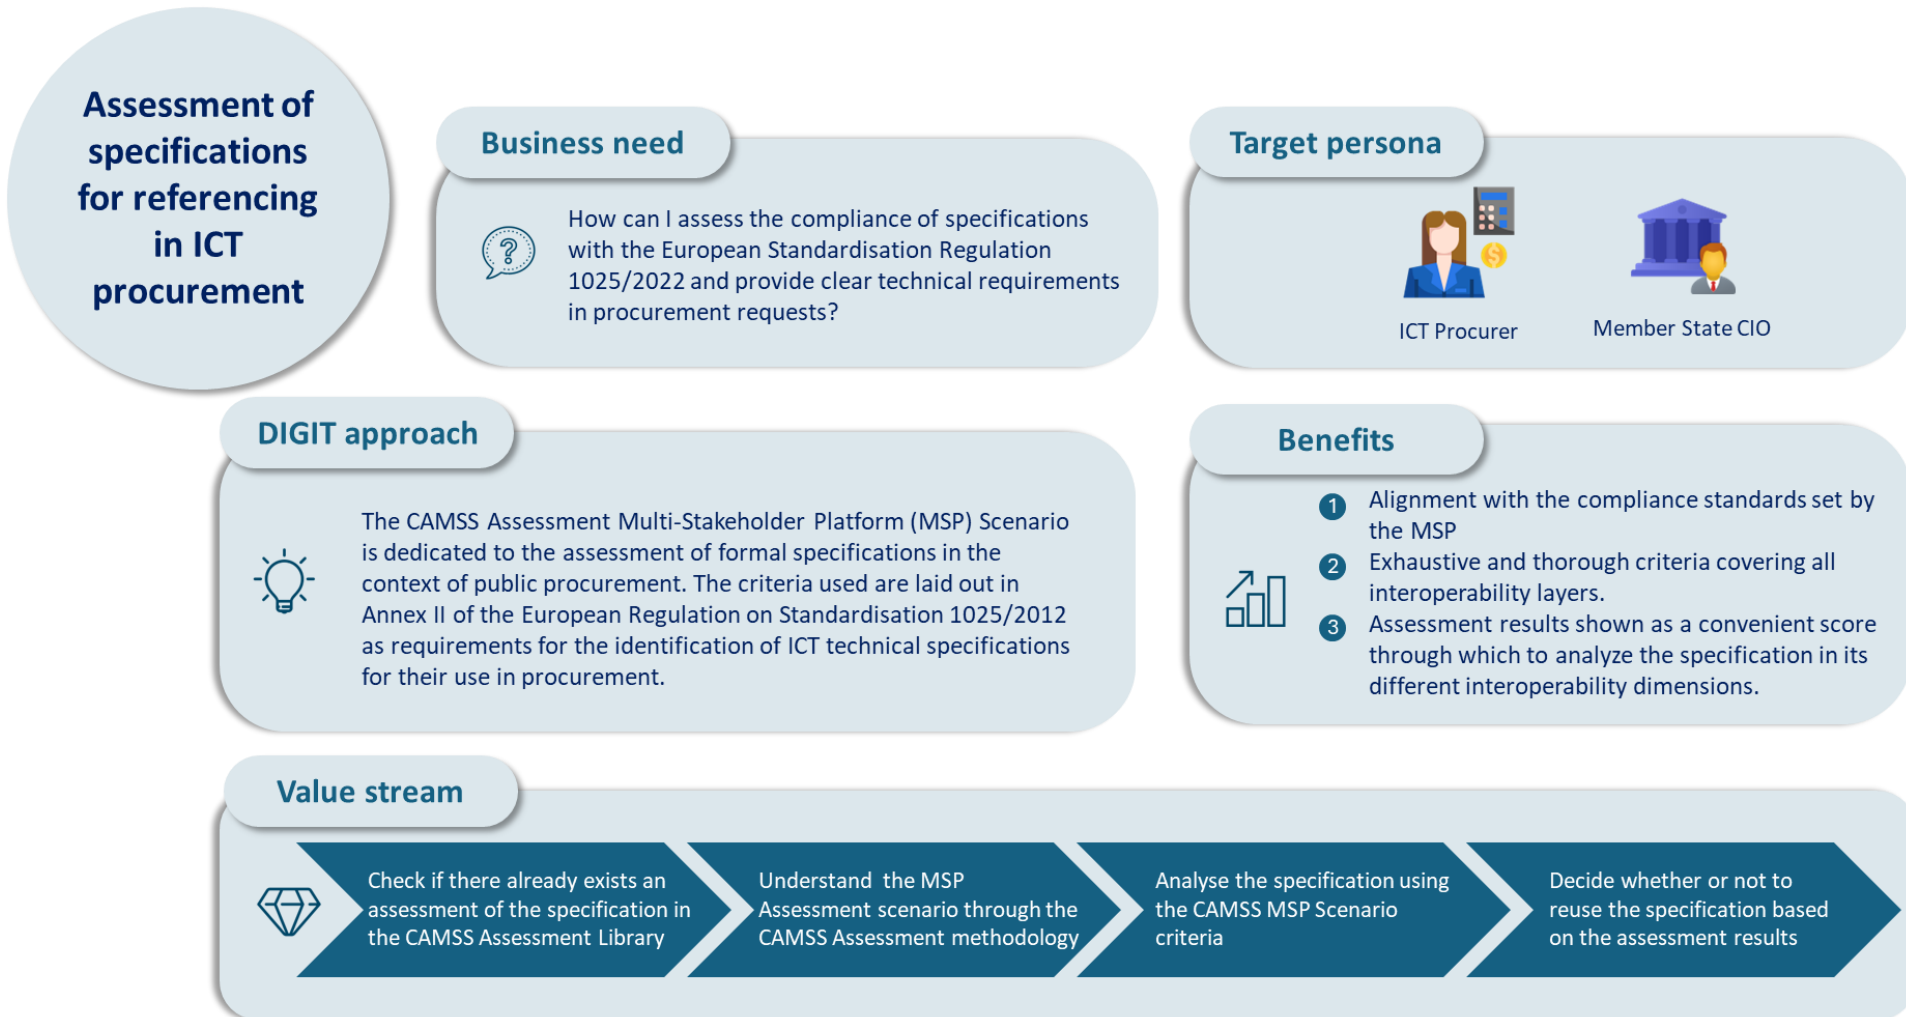

This CAMSS scenario is dedicated to the assessment of formal specifications in the context of public procurement. The criteria used are laid out in the Annex II of the regulation on standardisation 1025\_2012 as requirements for the identification of ICT technical specifications for their use in procurement. This scenario is used to support the Multi-Stakeholder platform for European Standardisation on the identification of technical specifications.

---

# CAMSS Assessments MSP Scenario

## Value Proposition

# CAMSS Assessment Incompatibility Scenario

The CAMSS Incompatibility Scenario aims to evaluate whether integrating a new specification or standard into an existing environment could potentially hinder its interoperability. This scenario helps determine the impact of introducing new digital business capabilities or adapting to new interoperability requirements by examining how the new specification might affect the current system's ability to exchange data and information effectively.

**CAMSS Incompatibility Scenario**

Home | RSE Information | Assessment Description | Assessment Configuration | Assessment Criteria | Assessment Results

**What is CAMSS?**

CAMSS is the European guide for assessing and selecting standards and specifications for an eGovernment project, a reference when building an architecture and an enabler for justifying the choice of standards and specifications in terms of interoperability needs and requirements. It is fully aligned with the European Standardisation Regulation 1025/2012.

**What is the CAMSS Incompatibility Scenario?**

The goal of the CAMSS incompatibility scenario is to check whether the integration of a specification/standard in an existing environment (an AS-IS environment) may somehow menace the interoperability of the environment with the solutions with which it exchanges data and information. The reasons to integrate new specifications in the AS-IS Environment are normally the implementation of new digital business capabilities or, in general, the adaptation of the existing AS-IS Environment to new interoperability requirements. The result of the integration can be named the TO-BE Environment (i.e., the desired target environment).

The incompatibility scenario allows us to assess the incompatibility level of specifications, but also to compare different incompatibility assessments. Therefore, please indicate your option:

⚠ Disclaimer: The European Commission is not responsible for the content of questionnaires created using the CAMSS Incompatibility Scenario - it remains the sole responsibility of the form creator and manager. The use of the CAMSS Incompatibility Scenario does not imply a recommendation or endorsement, by the European Commission, of the views expressed within them.

[New Incompatibility Assessment](#) | [Compare incompatibility assessments](#)

Please select whether you want to start a new incompatibility assessment or to compare different incompatibility assessments already performed previously

**Information**

Before starting a new assessment, please read the following information:

For users (assessors) to answer the questions effectively, the following recommendations are highly beneficial:

1. Thoroughly study the specification intended for integration into the SSB and AS-IS environments.
2. Verify the existence of a CSV description for the specification. If unavailable, create a description using the CSV as a guide.
3. Determine if the specification has undergone an EF Scenario assessment. This assessment can provide valuable insights into the specification and how to address incompatibility questions.
4. Carefully read each question and analyze how integrating the specification might impact the aspects mentioned. If necessary, consult the Actimale EISA model for definitions, interoperability salency, and additional information. Consider the specification's characteristics and its alignment with the local ERA4+ AB properties.
5. Recognize that the negative effects of a specification on an interoperability enabler can often be mitigated through adaptation, specialization, customization, or data/functionality transformation. In such cases, estimate the effort required to make the original specification compatible. Document how to overcome these gaps.
6. Acknowledge that incorporating the specification might offer positive aspects that further justify its integration. When this occurs, utilize the "additional comments" field to explain why the specification should be integrated (refer to the provided examples).
7. Regardless of the answer to the first question (YES/NO/NOT APPLICABLE), provide additional details whenever possible, especially for "NOT APPLICABLE" answers.
8. Formulate a final recommendation, specifying whether or not the specification should be integrated.

# CAMSS Assessment Incompatibility Scenario

## Value Proposition

Ensuring seamless integration and interoperability of specifications

### Business need

How can I assess if a new specification will disrupt current interoperability in an existing solution?

### Target persona

Solutions architect /  
Enterprise Architect

Member State CIO

### DIGIT approach

The CAMSS Incompatibility Scenario helps determine the impact of introducing new digital business capabilities or adapting to new interoperability requirements. To this end, it examines how the new specification might affect the current system's ability to exchange data and information effectively

### Benefits

- 1 Identify and mitigate potential interoperability issues before implementation and ensure seamless integration of new specifications
- 2 Maintain system interoperability and avoid disruptions
- 3 Provide a structured assessment methodology for evaluating compatibility

### Value stream

Define AS-IS environment and specification to ensure a clear understanding of the current interoperability landscape

Evaluate the new specification against the AS-IS environment to identify potential interoperability issues

Assess the new specification's impact to understand the extent of changes needed and possible disruptions

Make informed decisions and plan for integration, ensuring smooth implementation and system interoperability

**“CAMSSaaS is the service provided by CAMSS for the execution and review of assessments on demand”**

**Request the service at:**  
[DIGIT-CAMSS@ec.europa.eu](mailto:DIGIT-CAMSS@ec.europa.eu)

**There are 3 modalities of service:**

1

### **CAMSS Assessment**

In this modality the user requests the CAMSS Team to perform the assessment of a technical specification.

2

### **CAMSSaaS Content Review**

In this modality the user requests the CAMSS Team to review an already performed assessment. The CAMSS Team will perform an in-depth review of the information, improving the answers of the user when need and challenging them in order to strengthen the quality of the assessment as much as possible.

3

### **CAMSSaaS Compliance Review**

In this modality the user requests the CAMSS Team to review an already performed assessment. The CAMSS Team will perform a review of the assessment in order to determine if it has been properly filled, not challenging the actual content of it.

**“CAMSSaaS is the service provided  
by CAMSS for the execution and  
review of assessments on demand”**

**Request the service at: [DIGIT-  
CAMSS@ec.europa.eu](mailto:DIGIT-CAMSS@ec.europa.eu)**

**There are 3 modalities of service:**

**1**

### **CAMSS Assessment**

In this modality the user requests the CAMSS Team to perform the assessment of a technical specification.

**2**

### **CAMSSaaS Content Review**

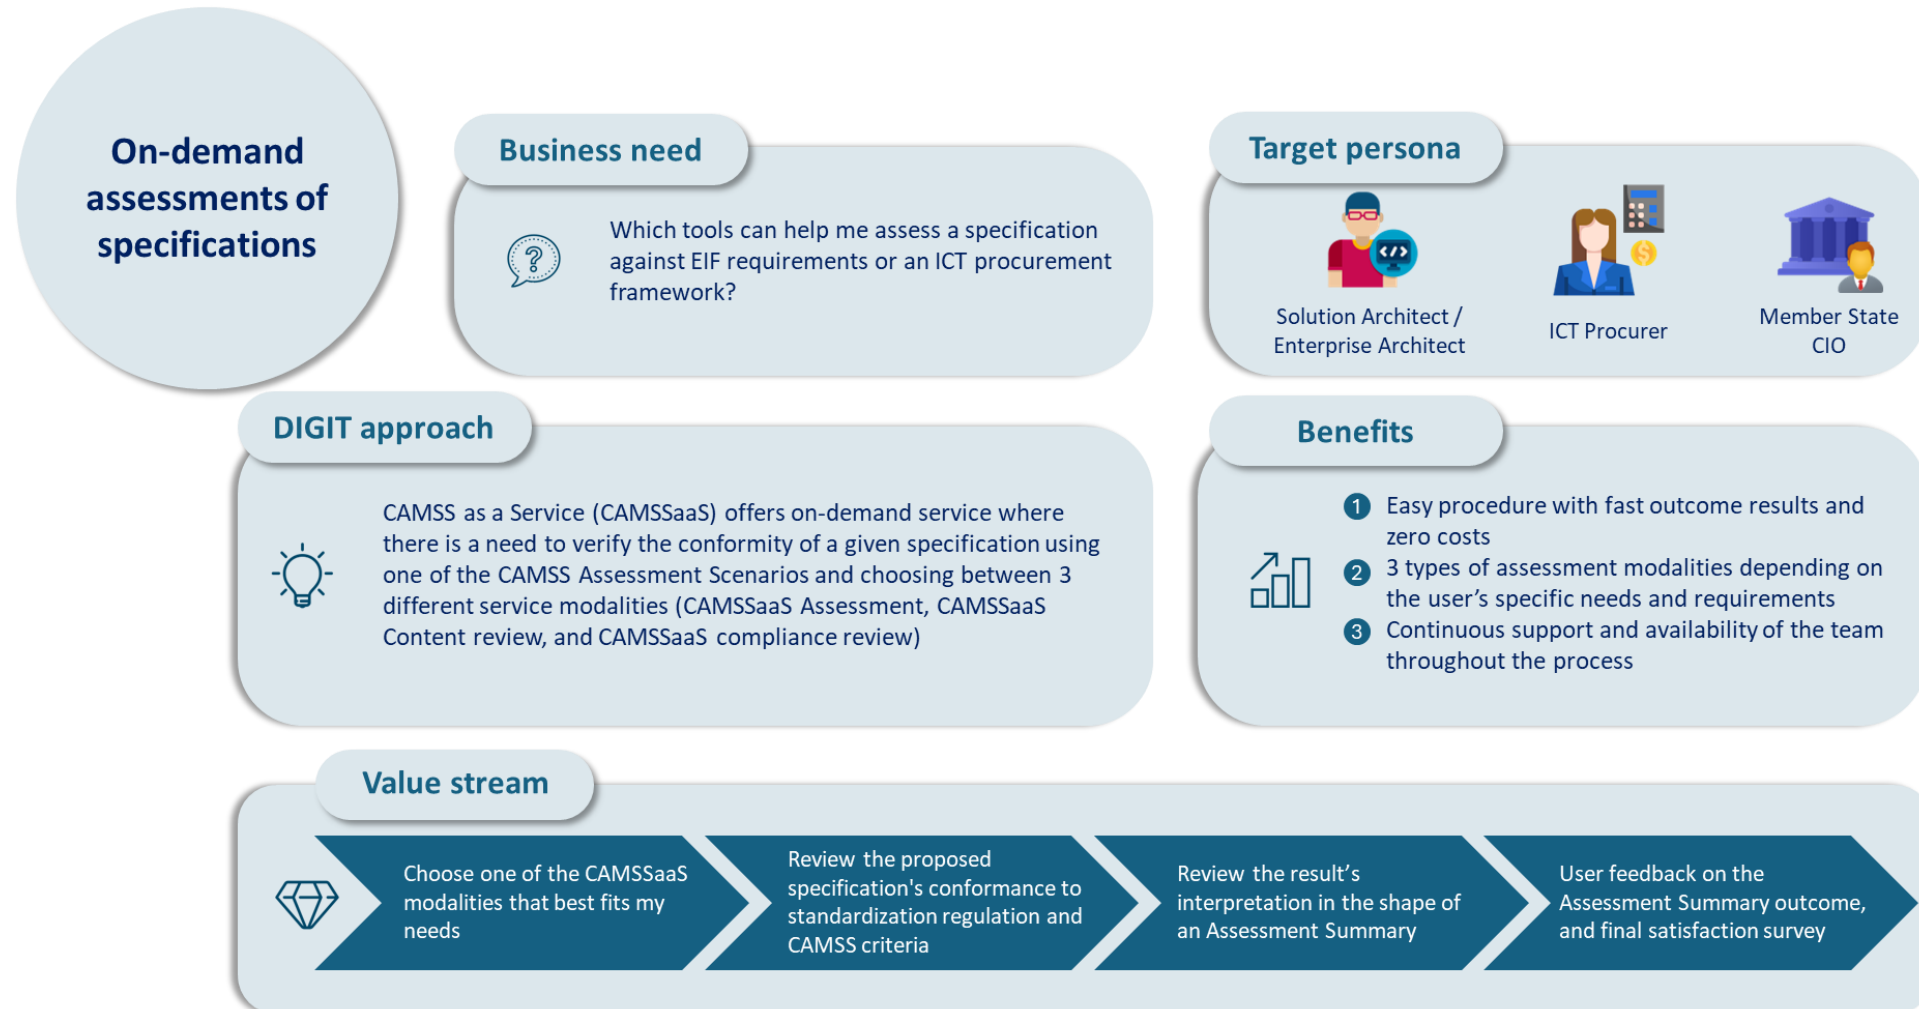

In this modality the user requests the CAMSS Team to review an already performed assessment. The CAMSS Team will perform an in-depth review of the information, improving the answers of the user when need and challenging them in order to strengthen the quality of the assessment as much as possible.

**3**

### **CAMSSaaS Compliance Review**

In this modality the user requests the CAMSS Team to review an already performed assessment. The CAMSS Team will perform a review of the assessment in order to determine if it has been properly filled, not challenging the actual content of it.

# ELIS

## EIRA Library of Interoperability Specifications

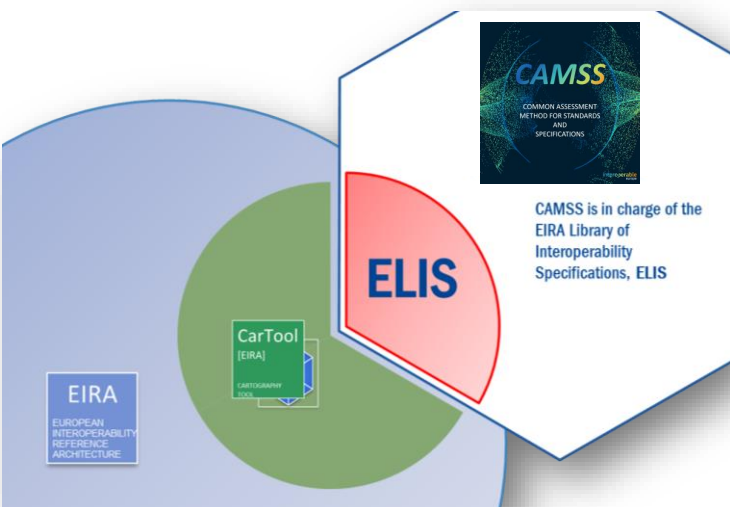

The EIRA Library of Interoperability Specifications (ELIS) contains and extensively documents the specifications describing the interoperability requirements of the different EIRA v5.0.0 architecture building blocks. As an element of the EIRA, the ELIS constitutes a tool for supporting architects on the process of modelling EIRA-based solutions.

*“The ELIS is a modelling tool-agnostic but not architecture-agnostic library of interoperability specification”*

The ELIS is implemented by CarTool, and its metrics can be consulted over time in the following link:

<https://joinup.ec.europa.eu/collection/common-assessment-method-standards-and-specifications-camss/solution/elis>

### Selection of best-in-class specifications for ICT solutions

#### Business need

How can I know which technical specification fits best for the design and development of a solution?

#### Target persona

Solution Architect /  
Enterprise Architect

ICT Procurer

#### DIGIT approach

The EIRA Library of Interoperability Specifications (ELIS) serves as a catalogue that extensively documents specifications and associates them to each of the EIRA Architecture Building Blocks (ABBs). In addition, all CAMSS Assessments with a higher score than 75% are included

#### Benefits

- 1 Inclusion of all specifications assessed with the CAMSS method
- 2 Documentation of specifications and guidance through ABBs easing the decision-making process of choosing the best fit-for-purpose specification
- 3 Yearly-update to guarantee the validity and accuracy of the information

#### Value stream

Align solution's needs with the EIRA guidelines to Identify the ABBs that need to be fulfilled

Find in the ELIS the specifications that best fit your requirements and its association with the EIRA ABBs

Look for assessed specifications covering the needed ABBs to ensure seamless interoperability

Retrieve all the documents in the CELLAR repository for more in-depth information retrieval

# CSSV

## *Core Standards and Specifications Vocabulary*

The CSSV is the vocabulary used for the information exchange related to standards and specifications amongst software solutions, and also for the description of themselves like EIRA, CPSV, IMAPS, amongst other specifications. The CSSV is the key element for the development of the EIRA Library of Interoperability Specifications (ELIS).

---

## Vocabulary for standards and specifications description

### Business need

Which vocabulary can I use to describe and exchange information about standards and specifications?

### Target persona

Solutions architect /  
Enterprise Architect

Member State CIO

### DIGIT approach

The Core Standards and Specifications Vocabulary (CSSV) is the vocabulary used for the information exchange related to standards and specifications amongst software solutions, and it is the key element for the development of the new release of the EIRA Library of Interoperability Specifications (ELIS)

### Benefits

- 1 Enhancement of the understanding and communication across different stakeholders, including policymakers, IT developers, and end-users, making it easier to share and compare information across borders
- 2 Reusable asset to describe any kind of standard or specification.

### Value stream

Map vocabularies to your ICT national catalogue

Reuse and consider assessments for the inclusion or exclusion of specifications in your catalogue

Publish your National ICT Catalogue data in CELLAR for retrieval and discovery

Compare and find recommended specifications from other MS

The Core Assessment Vocabulary represents and defines what an “Assessment” of “assets” is and how to perform the assessment based on “Criteria”. It is a domain-agnostic vocabulary, meaning that it can be used to assess any type of assets.

---

## Vocabulary for the description of assessments

### Business need

How can I, develop assessment tools that meet CAMSS requirements to support cross-border and cross-domain data exchange?

### Target persona

Solutions architect /  
Enterprise Architect

Member State CIO

### DIGIT approach

The Core Assessment Vocabulary (CAV) defines rules and constraints to represent, express and define what an "Assessment" of "Assets" is, and how to perform assessments based on "Criteria" regardless of the domain of the assets to be evaluated.

### Benefits

- 1 Ensure that all parties have common understanding of assessment criteria.
- 2 Reusable asset to describe any kind of assessment and the evidences needed to support it.
- 3 Allows for an easier comparison of different standards and specifications.

### Value stream

Development of an  
assessment tool based on the  
CAV rules and constraints

Integration of CAV into existing  
assessment tools and processes  
to provide a uniform language  
for assessments.

Production and publication of  
the assessments in linked data  
platforms.

Compare and find  
assessments from other MS  
implementing the CAV.

# ELAP

## *European Library of Architecture Principles*

The ELAP is a library intended to direct government organizations in initiating changes and implementing IT projects. The principles are described in relation to relevant policy frameworks, established standards, building blocks and examples that are already available, so that they are as recognisable as possible in practice.

This library is implemented in the CarTool in the same way the EIRA Library of Interoperability Specifications (ELIS) is. In addition, ELAP will be also accessible through the CAMSS collection in Joinup.

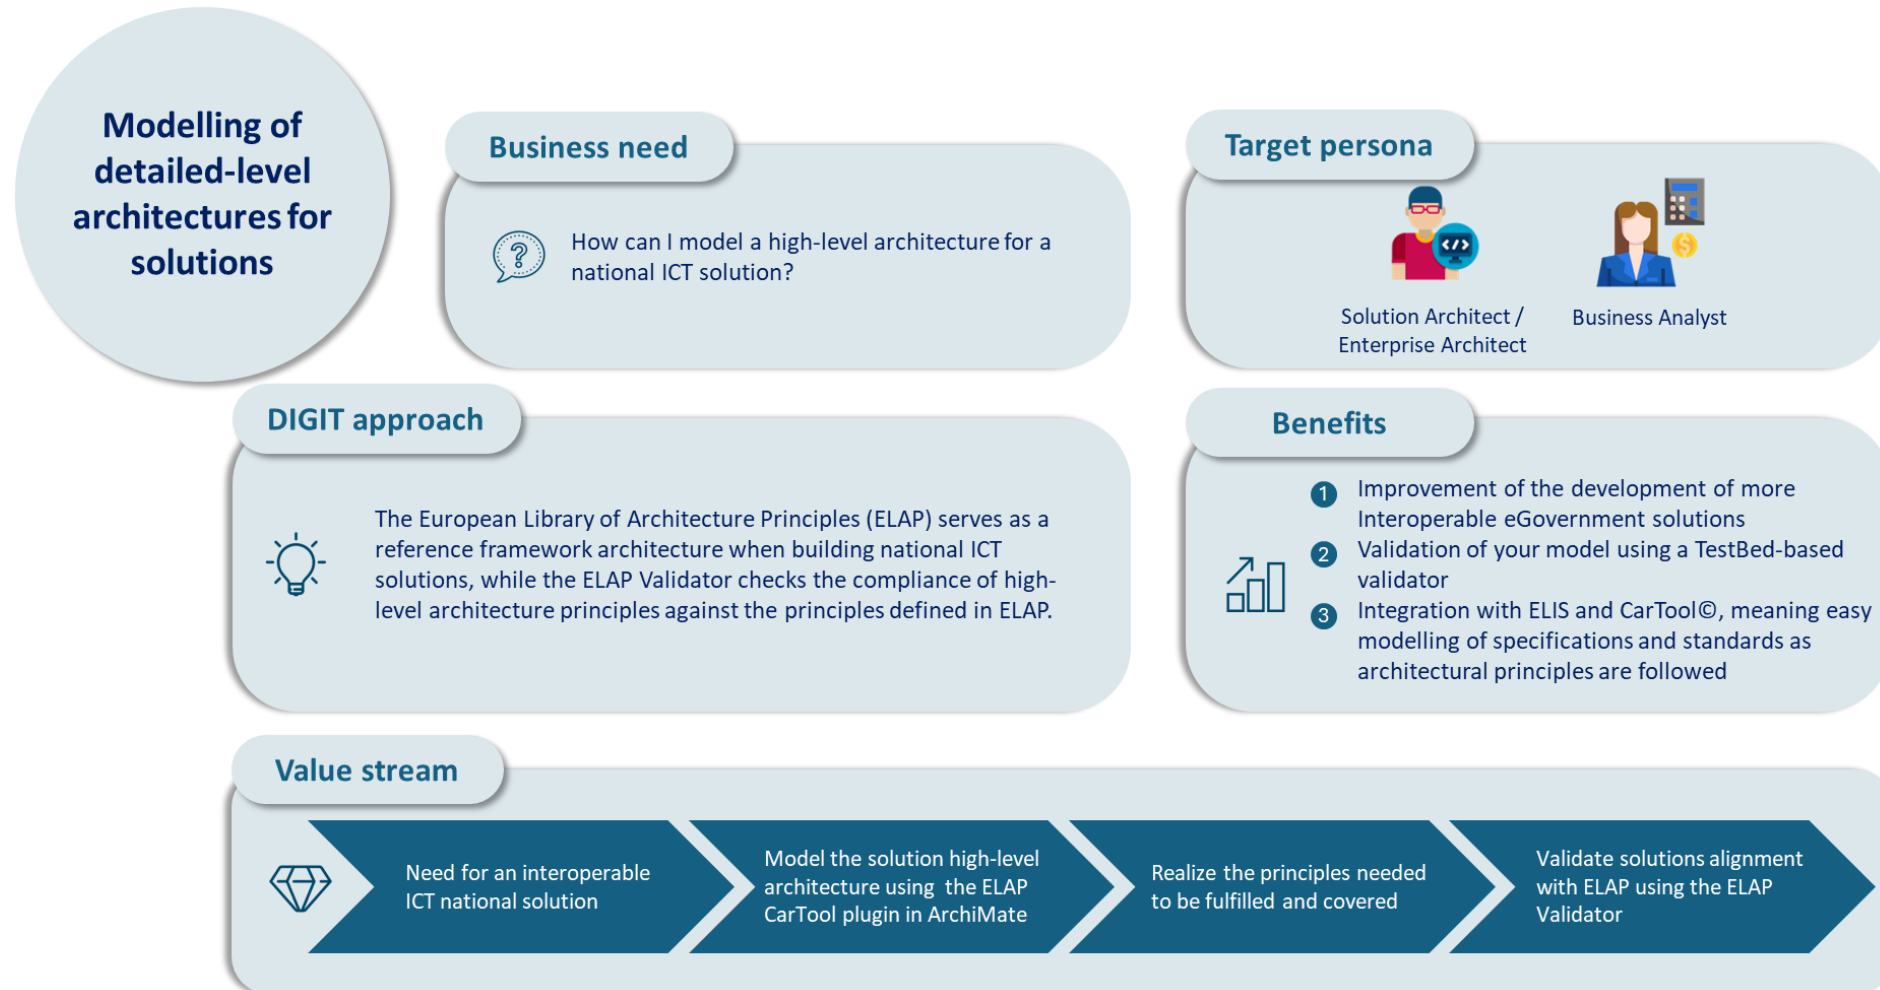

The **ELAP Validator** is a comprehensive tool developed to **address a variety of needs in the design and implementation of interoperability solutions** within public institutions in Europe. The ELAP Validator allows for the conformance testing of a designed solution against the principles and guidelines of ELAP

---

# ELAP and ELAP Validator
